

# 4p16.3-15.32 deletion — WFS1 Molecular Atlas Card

**Variant type:** Copy-number variant (deletion)

**Region:** Chromosome 4p16.3-15.32 (gene-level structural event)

## CNV-LOSS — COPY-NUMBER DELETION — 4P16.3-15.32

---

This is a large copy-number deletion spanning 4p16.3-15.32 — a gene-level event causing loss of one copy of this region (wolframin haploinsufficiency or, with a second hit, loss of function). CNVs act by dosage rather than by altering a single residue, so AlphaFold residue mapping,  $\Delta\Delta G$ , NMD and AlphaMissense don't apply. Therapeutically these are gene-replacement candidates (restore a working copy); per-residue chaperone/readthrough strategies are not relevant. Confirm breakpoints and gene content against the ClinVar record below.
