4p16.3-16.1 duplication — WFS1 Molecular Atlas Card

Variant type: Copy-number variant (duplication)

Region: Chromosome 4p16.3-16.1 (gene-level structural event)

CNV-GAIN — COPY-NUMBER DUPLICATION — 4P16.3-16.1

This is a large copy-number duplication spanning 4p16.3-16.1 — a gene-level event causing an extra copy of this region (gene over-dosage / partial trisomy). CNVs act by dosage rather than by altering a single residue, so AlphaFold residue mapping, ΔΔG, NMD and AlphaMissense don't apply. Therapeutically these are gene-replacement candidates (restore a working copy); per-residue chaperone/readthrough strategies are not relevant. Confirm breakpoints and gene content against the ClinVar record below.

CLINICAL EVIDENCE

- **Classification:** Likely pathogenic
- **Review status:** no assertion criteria provided
- **Associated conditions:** See cases
- **ClinVar accession:** VCV000443978
- **Genomic variant:** GRCh37/hg19 4p16.3-16.1(chr4:68345-8731855)x3
- **Last evaluated:** 2014/05/05 00:00

Card generated by `wolfram-atlas-batch` (CNV pipeline) on 2026-06-08T03:03:52.340350Z.

CNVs are gene-level events; WFS1 protein reference UniProt O76024 is not residue-mapped here.
