

# 4p16.3-11 duplication — WFS1 Molecular Atlas Card

**Variant type:** Copy-number variant (duplication)

**Region:** Chromosome 4p16.3-11 (gene-level structural event)

---

## CNV-GAIN — COPY-NUMBER DUPLICATION — 4P16.3-11

---

This is a large copy-number duplication spanning 4p16.3-11 — a gene-level event causing an extra copy of this region (gene over-dosage / partial trisomy). CNVs act by dosage rather than by altering a single residue, so AlphaFold residue mapping,  $\Delta\Delta G$ , NMD and AlphaMissense don't apply. Therapeutically these are gene-replacement candidates (restore a working copy); per-residue chaperone/readthrough strategies are not relevant. Confirm breakpoints and gene content against the ClinVar record below.

---

## CLINICAL EVIDENCE

---

- **Classification:** Pathogenic
  - **Review status:** no assertion criteria provided
  - **Associated conditions:** See cases
  - **ClinVar accession:** VCV001711164
  - **Genomic variant:** GRCh37/hg19 4p16.3-11(chr4:68345-49089361)x3
  - **Last evaluated:** 1/01/01 00:00
- 

*Card generated by wolfram-atlas-batch (CNV pipeline) on 2026-06-08T03:03:52.333413Z.*

*CNVs are gene-level events; WFS1 protein reference UniProt O76024 is not residue-mapped here.*
