MOLECULAR ATLAS · VARIANT CARD

WFS1 N400D — Wolframin

Asparagine → Aspartic acid at position 400. Cytoplasmic loop 2. ClinVar Uncertain significance, AlphaMissense 0.601, DynaMut2 ΔΔG -0.23 kcal/mol (destabilising).

IDENTITY

Variant	N400D (p.Asparagine400Aspartic acid)
DNA change	c.1198A>G
Gene · Protein	WFS1 · Wolframin (890 aa)
UniProt	O76024 · WFS1_HUMAN
ClinVar accession	VCV002106804
Amino acid change	Asparagine (N) → Aspartic acid (D)

STRUCTURAL CONTEXT

AlphaFold model	AF-O76024-F1, v6
pLDDT at residue 400	**79.81** HIGH CONFIDENCE
Domain	Cytoplasmic loop 2
Position context	Loop region · position 400 sits between transmembrane segments, solvent-accessible
IDR flag	No — pLDDT well above 50 threshold

> Position 400 sits in a connecting loop between transmembrane helices. Loop residues are typically solvent-exposed and often contribute to interhelical contacts or serve as recognition sites for binding partners. The wild-type residue is polar amide (asparagine — H-bond donor/acceptor); the mutant is negatively charged (aspartate — carboxylate). The chemistry shift implies altered local packing, hydrogen-bonding, and/or electrostatics at this site.

COMPUTATIONAL PREDICTIONS

ALPHAMISSENSE

0.601

am_class: **likely pathogenic** — threshold > 0.564

DYNAMUT2 ΔΔG

-0.23 kcal/mol

Destabilising · Job 178092132166

PLDDT (ALPHAFOLD)

79.81

high confidence

CLINICAL EVIDENCE

ClinVar classification	UNCERTAIN SIGNIFICANCE
Review status	criteria provided, single submitter
Last evaluated	2022/03/14 00:00
Inheritance	Inheritance pattern not specified in ClinVar entry; WFS1 has both AD and AR presentations.
WFS1 variant landscape	N400D is 1 of ~326 pathogenic-spectrum variants in WFS1 (out of 2,243 in ClinVar)

- (no conditions catalogued)

RESEARCH PATH DECISION TREE

```
ΔΔG < 2 + binding site affected → CATEGORY 3 — docking experiments ΔΔG 2–4 → CATEGORY 2 — pharmacological chaperones ΔΔG > 4 → CATEGORY 1 — gene therapy pLDDT < 50 → CATEGORY 5 — IDR, experimental only Stable fold + functional site hit → CATEGORY 4 — site-specific docking
```

Category 3/4 — Most Druggable

|ΔΔG|=0.23 < 2 kcal/mol (fold intact) + AlphaMissense 0.601 confirms functional impact. Specific local contacts disrupted — priority for docking and pharmacological chaperone screening.

Wolframin's fold survives this substitution (|ΔΔG|=0.23 kcal/mol). The pathogenic signal is real — AlphaMissense places it at 0.601. Protein still folds, but a specific local site is broken. Pharmacological chaperones and small-molecule binders are the rational therapeutic vector.
