

I349= — WFS1 Molecular Atlas Card

Variant type: Synonymous (silent)

Codon: position 349 (Isoleucine, I) — amino acid unchanged

Domain context: Transmembrane helix 2

SCHEMA CATEGORY: SILENT — SILENT — BUT NEAR AN EXON BOUNDARY (SPLICE EFFECT POSSIBLE)

No amino-acid change (I349 is unchanged), so there is no protein-level structural or stability effect. However, this codon sits within 3 residues of the exon junction near protein position 350 — close enough that the nucleotide change could perturb splicing. Worth a SpliceAI check (Wave 2); otherwise expected to be benign at the protein level.
