

c.862-118G_A — WFS1 Molecular Atlas Card

Variant type: Splice site

Boundary: acceptor (3' splice site) · intronic offset -118

Nearest protein position: ~288 (N-terminal cytoplasmic (intrinsically disordered))

SCHEMA CATEGORY: S3 — MINIMAL PREDICTED SPLICING IMPACT (SPLICEAI ΔS 0.00)

SpliceAI predicts little splicing disruption at this acceptor (3') site (max ΔS 0.00 < 0.2; acceptor-gain 0.00, acceptor-loss 0.00, donor-gain 0.00, donor-loss 0.00). The variant may be tolerated or act through a weak/again-tissue-specific mechanism; wet-lab RNA validation is the arbiter before any therapeutic call.

SPLICE PREDICTION

- **Affected site:** acceptor (3' splice site), extended splice region
- **SpliceAI delta scores** (GRCh38 chr4:6300539 G>A):
 - acceptor gain **0.00** · acceptor loss **0.00**
 - donor gain **0.00** · donor loss **0.00**
- **Predicted outcome:** Minimal predicted splicing impact (SpliceAI ΔS 0.00)

CLINICAL EVIDENCE

- **Classification:** Benign
- **Review status:** criteria provided, multiple submitters, no conflicts
- **cDNA change:** c.862-118G>A
- **ClinVar accession:** VCV001242923

- **Last evaluated:** 2018/06/28 00:00
 - **Submissions:** 1
